STAT

Dear 

STAT

We have received your letter concerning key generation using PC software and thank you for your kind offer to supply it to us. However, in concert with other appropriate government entities, we have developed and implemented sufficiently secure communications capabilities to meet our requirements. Therefore, we do not have a need for your development.

Secure communication is an area currently receiving much attention in the commercial sector. Perhaps your development could have application in that arena and you may want to pursue this with a commercial enterprise.

Again, thank you for your offer; we appreciate your thinking of us.

OPTIONAL FORM 41 (Rev. 7-76)
Prescribed by GSA
FPMR (41 CFR) 101-11.206

C.I.A. Computer Office
Head of Computer Cryptography
Washington, D.C. 20505

11/30/87

To whom it may concern:

I am writing to you to inform you that I have written a computer program, for most micro computers, that will allow field operatives to communicate in a secure manner.

I have never had the opportunity to serve in our Armed Forces or in government, and I would like to know that our people are able to communicate with their staff and peers in a 'secure' way.

This program can be configured to run on many different systems and even to run on the Zenith 181 portables. I also can supply a version to run on the small Tandy 100/102 and the NEC 8201 laptop portables.

The 'code' generated by this program is very, very secure and without the 'KEY' numbers used to encrypt the message, it would take a CRAY super computer years to crack. The current version will soon be upgraded to use 100 digit numbers. This means it would take a CRAY about 75 YEARS, even WITH one of the cypher 'KEYS', to crack the code generated by my program.

The program is totally independent, meaning if you have the program and you wish to generate new 'KEYS', then all you need to do is run the program; generate the encryption/decryption 'KEYS' and you have a secure link by which you can send and receive communications. Of course the party you wish to communicate with will need their own copy of the program. They do not need to have your 'Decryption KEY' to SEND you secure messages, only your 'Encryption KEY'. Each operative can have their own personal 'KEYS', which can be changed as often as needed.

The program has not been sold to anyone and it is my wish to only supply it to you. I feel your offices can make the most of a program like this. I will support the software for as long as needed and will be willing to provide training to personnel as to it's uses. I have written the program so it can be used by the novice computer user with menus and a easy to read manual.

Please respond to the address below or feel free to phone me at my home. The number provided is good most hours.

Sincerely,

[Redacted Signature]
